

Hydrogen Economy for Low Carbon Society

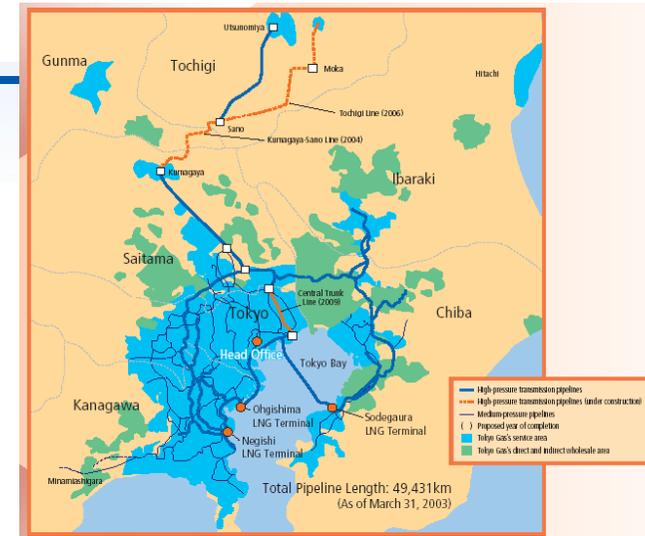

Technology Development Division,

Tokyo Gas Co., Ltd.

13-14 Feb, 2008

Outline of Tokyo Gas

■ Tokyo Gas LNG Imports

Tokyo Gas service area

Gas Facts in Japan & Tokyo (FY 2006)

	All Japan	Tokyo Gas
Number of Customers (unit: million)	28.1	10.0
City Gas Sales (unit: billion m ³ , 42MJ/m ³)	33.8	13.1
Gas Pipeline Length (unit: thousand km)	232.3	51.6

CO2 Emission from City gas (FY 2006)

	All Japan	Tokyo Gas
City gas Production	0.071	0.014
City gas User	70	30

unit: million t-CO₂

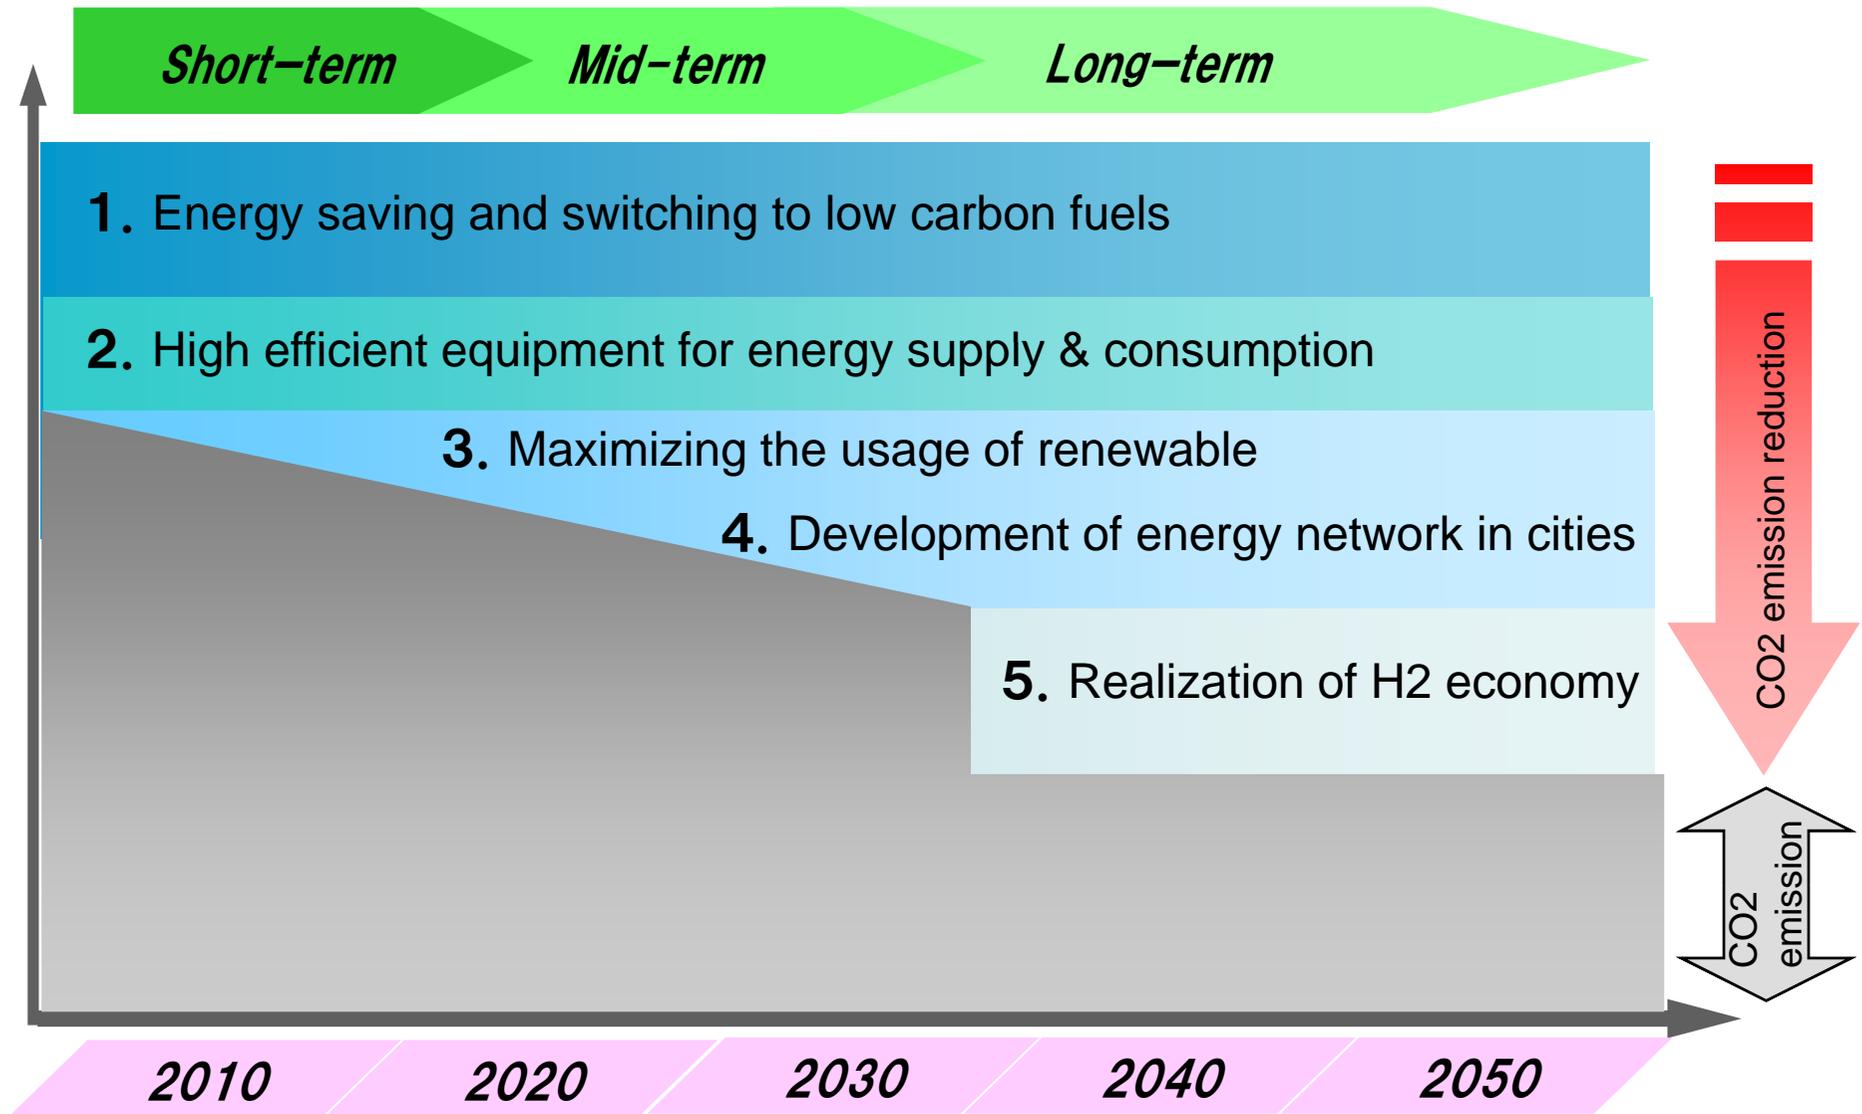

CO₂ Emission from Japan : 1,275 million t-CO₂

TEAM ENERGY : Energy System in 2030

Suburb: Various Renewable Energy Area

Transition to Low Carbon Society

High efficient equipment for energy supply

Short-term solution = FC

Japan is using FC for Residential CHP

Prime Minister's Residential Area
(April 8, 2005)

PEFC

Electric efficiency 37%

CO₂ reduction 45%

(LHV)

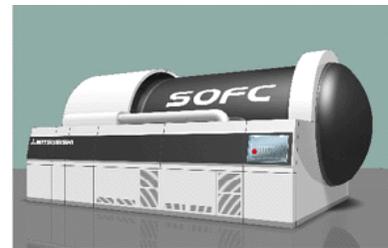

Increase of FC's Electric Efficiency

SOFC

Residential 45%
Industrial 67%

(Combined Cycle System)
(LHV)

Grid Power
Average 41%
Highest 54% (LHV)

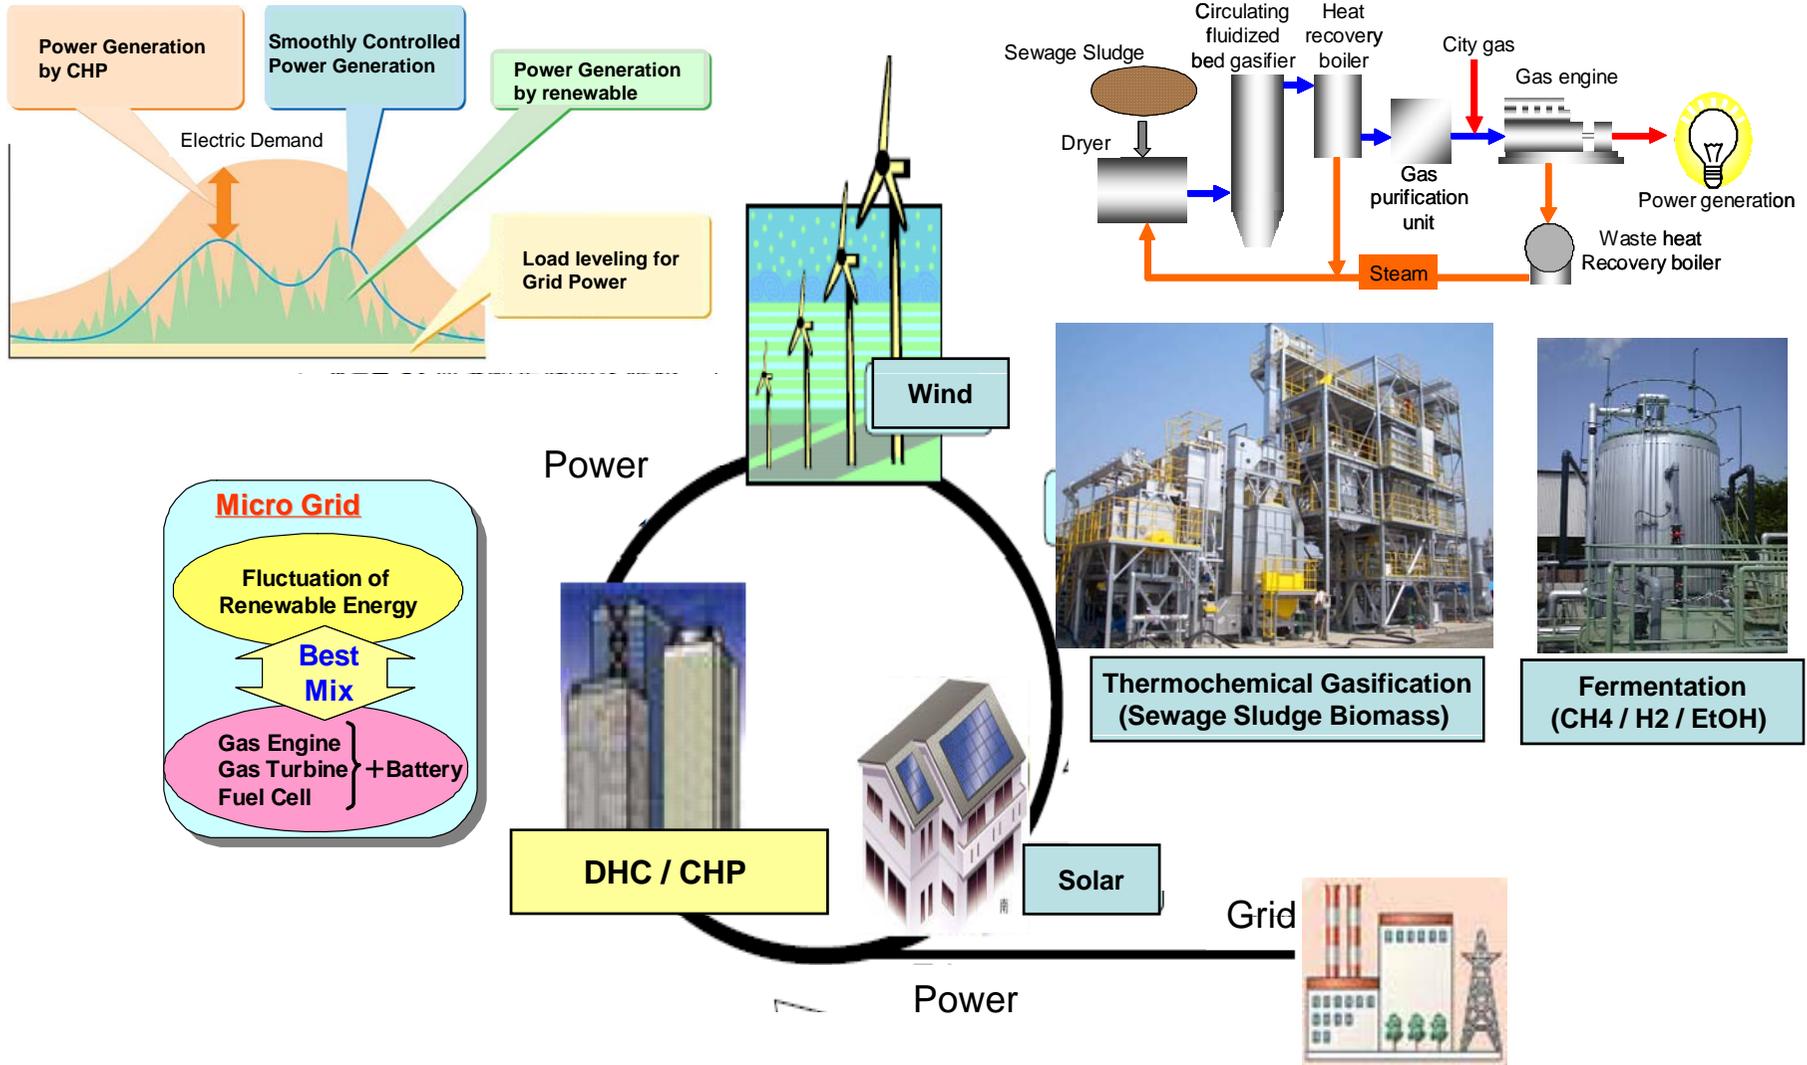

“Large-Scale Stationary Fuel Cell
Demonstration Project” (05~08)

• FY05:480units FY06:777units FY07:930units

“SOFC Demonstration Project” (07~)

Energy Network for Maximize Renewable Usage

Mid-term solution = biomass & microgrid

H2 fueling for Low Carbon Society

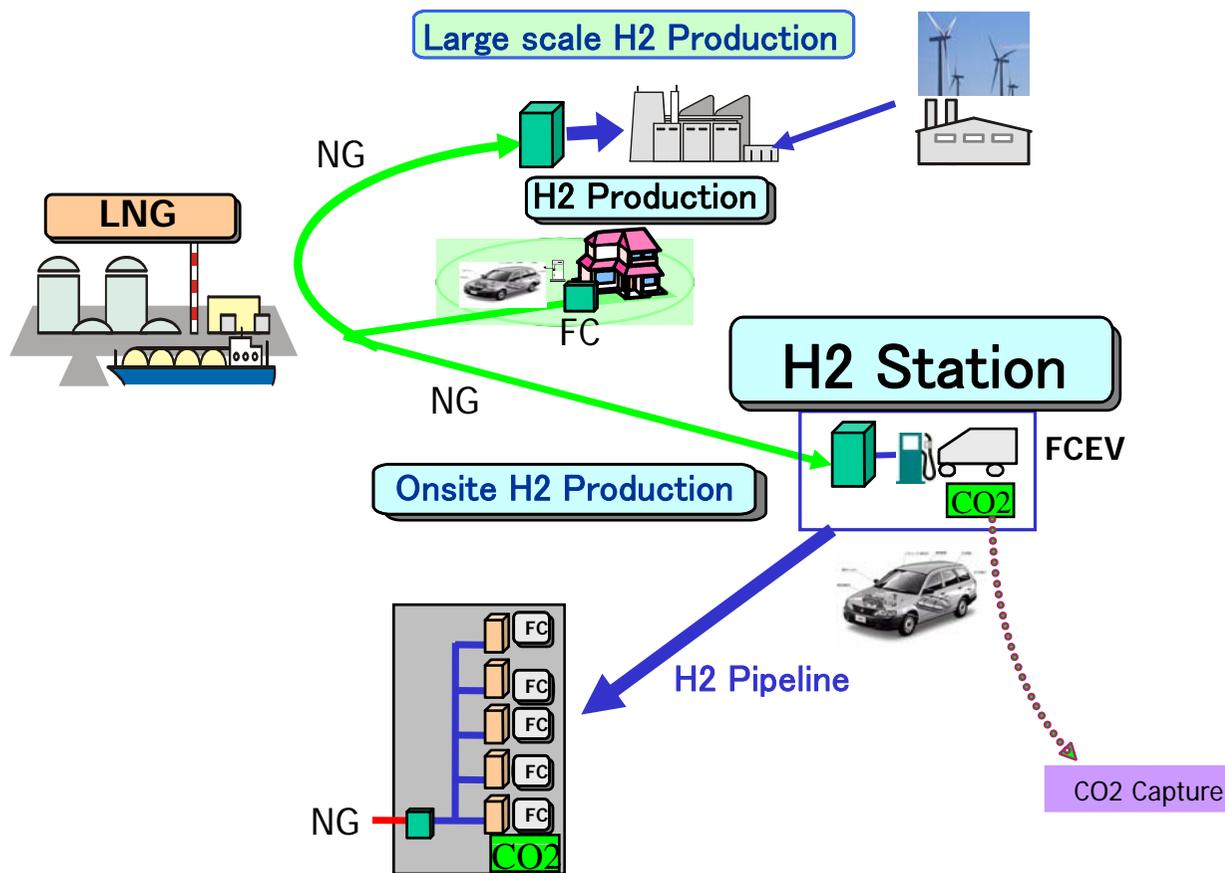

Using H2 for fuel, there are no CO2 in the exhaust !

Hydrogen Fueling Station for FCV

Local H2 Economy with Distributed CCS

Long-term solution = H2 Economy

Key Issues

- Roll-out of H2-FCV*
- Investment on H2 infrastructure*
- CO2 management (including CCS)*
