

Sustainable development policies and measures (SD-PAMS)

3rd LCS Workshop
Tokyo, Japan, 13th-15th February, 2008

Stanford Mwakasonda

Energy Research Centre
University of Cape Town

**Key Message on
SD-PAMs**

Strategic approach

- Tap into the primary motivation for DCs – development
- Build on existing commitments (FCCC Art 2, 3.4, 4.1, KP 10)
- A commitment to implement SD policies
 - not based on climate target, but choosing a development path that results in lowered emissions
- Large-scale policies and measures, not projects
- Formalise this pledge
 - Could be a list of countries
 - Could be a register of pledged policies and programmes
- Establish methodologies for quantifying benefits of SD-PAMs (both SD and CC)

Recommendations to Policy Makers

Recommendations

- Backcast from desired future state of development, not GHG reduction goal or cap
 - Identify PAMs to achieve development objectives more sustainably
 - a. Existing policy not fully implemented; or
 - b. New policies and / or more stringent measures
 - define most relevant sustainable paths to meet development objectives
- Commit to *implement identified SD policies*
 - Turn climate from 'threat' to development into genuine opportunity to make development sustainable
